The composite construction uses steel, aluminum and polypropylene in a robust design for long life. When the secure latch system is released, the deck is held open by a gas strut for easy access to the cargo below it. Depending on seat configuration, accessories can be left on the deck when opening.

PERSONALIZED FIT

SEAMLESS MATCH WITH YOUR SNOWMOBILE

Become one with your beloved sled and customize it to your body size, weight or strength. At Ski-Doo, we understand that not all riders come in the same body type, so it's only right that our snowmobiles come with plenty of personalization options. Why is this so important? The better your sled fits your body with our REV platform and custom ergonomic accessories, the more comfortable your adventures will be. And the more comfortable you are when you ride, the longer you can stay on the snow. What's possible with your Ski-Doo sled? Switching your seat for a better riding position. Matching your handlebars to the size of your hands. Fitting the rear spring preload and spring rate to your weight. The end game here is to make your ride more compatible with your body and its characteristics and make you a better rider. All we want is to keep you in your happy place — on your sled — for longer. Rider and machine, together in perfect harmony.

Based on their size or weight, all riders may require adjustments.

If you have smaller or larger hands, you may require handlebar adjustments.

LED SIGNAL LIGHTS

Shedding light on a new, innovative way to communicate with fellow riders on the trail. The LED Signal Lights keep your hands on the handlebars — where they should be. These lights are compatible with many models, stay visible in daylight and give peace of mind and control to all riders. The future of snowmobile communication is here to brighten your adventures.

HANDS-ON COMMUNICATION: HOW IT WORKS

Integrated in the handguard or windshield side deflectors of the sled, the LED Signal Lights use white, amber and green to create four modes and messages to oncoming riders. Whether you want to alert others that more riders are coming, that you're the lone rider, that a hazardous situation is looming or that you're last in the group, all you need is LED Signal Lights. Keeping your hands on the handlebars of your sled creates a safer riding environment for everyone, where messages are clear and all are in control.

LED Signal Lights for Windshield (860202703) are available for windshields! If you're riding with a medium or a higher windshield, you can use this communication system too. Install it on Windshield Side Deflector Kits for medium and higher windshields to communicate with other trail riders in an innovative and confident way.

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers and on approved pre-patterned tracks only. These tracks come standard on most Ski-Doo snowmobiles. Look for this symbol on your track. Woody's products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operator's Guide for more details.

WHAT MAKES BRP DRIVE BELTS STAND OUT?

PERFECTLY ENGINEERED FOR YOUR RIDE

BRP drive belts are developed alongside each vehicle to perfectly match drivetrain calibration and deliver maximum performance. Designed, tested and manufactured to rigorous specifications, BRP drive belts also deliver superior throttle response and no RPM loss.

PROVEN WINNERS

In addition to the countless hours of dyno and physical field-testing we do on every drive belt, we go racing, where every component is stressed to the maximum. For years, Ski-Doo racers have been winning countless events across the globe. Underneath all the trophies and champagne? A BRP drive belt.

ADVENTURE WITH CONFIDENCE

Performance means little without durability, and our manufacturing consistency assures you'll get the most out of every adventure. Extra miles equal extra memories, and BRP drive belts are engineered to deliver maximum longevity for your ride.

SUPERIOR CONSTRUCTION

- 1** The top cog adds strength and reduces belt deformation. It's typically made with a different compound than the lower cog nearest the clutch center as the two are designed to perform different tasks in transferring power to the track.
- 2** Adhesion layers. These promote adhesion from the cogged undercord compound to the aramid cord.
- 3** BRP belts use tensile cord made with lightweight, high-strength, high-resistance aramid fibers. Each tensile cord layer in BRP belts is specific to the diameter required by the power and performance needs of your vehicle.
- 4** The undercord compound is a carefully curated compound of both natural and synthetic rubbers and high-performance materials. Intentionally designed for the proper flex and engagement profile of your clutch pulleys.
- 5** Specially designed impregnated fabric provides additional wear resistance to both the belt and your clutches.

CVT MAINTENANCE PARTS

PERFORMANCE DRIVE BELTS

- High performance drive belts calibrated to maximize your sled's performance.
- Aramid tensile cords used in construction for extra long life and dependability, also deliver a consistent length with minimal belt shrinkage and minimal length adjustments.
- High tensile reinforced fiber elastomer undercords provide minimal dusting and long term flex life.
- Flexweave overcord for superior adhesion and crack resistance.
- Consistent performance during life of belt.
- Quality you can count on for optimum performance.
- Built with distinctive durability features for mountain, trail or fast tracks.

DEFORMATION RESISTANCE UNDER STATIC COMPRESSION TEST

DUPLICATE OF LOAD APPLIED

BRP XD roller

The BRP XD roller withstands 4 times the load in compression compared to most popular aftermarket thermoplastic-type rollers with a displacement/ deformation of 0.5 mm.

QRS XD rollers are built to take a beating. With more impact resistance and less deformation than standard designs, they hold up under pressure, protect belt performance, and keep the pulley system running clean and smooth, ride after ride.

BUILT TOUGH TO KEEP POWER MOVING

Stronger than fiber rollers and more stable than thermoplastic designs, QRS XD rollers resist high-impact shocks and deformation that can seize pulleys or shred belts. A major upgrade for reliability, durability, and consistent performance under stress.

E-TEC MAX

FULL SYNTHETIC OIL

All 2 stroke oils are the same? E-TEC oils have proved that wrong ever since they touched a piston for the first time. Fueled by the 600RR engine, E-TEC takes a new form with the launch of MAX Technology—less smoke, less smell with MAX performance and superior protection, even with less oil.

MOLYBDENUM

Pure Moly is a new generation of molybdenum (M02S) friction modifier, a premium additive that greatly boosts lubrication performance.

Our unique Pure Moly additive delivers exceptional friction reduction and anti-wear protection by forming a low-friction protective film on metal surfaces. Pure Moly minimizes energy loss, reduces component wear, and extends engine life.

ASHLESS

Purpose-built, high quality, and non-metallic, the Ashless formulation is designed to clean out existing carbon deposits and prevent new ones from forming. Works by neutralizing and protecting against harmful acids produced by combustion.

E-TEC MAX keeps RAVE valves cleaner and prevents carbon buildup. Maintains higher levels of compression, thus power and performance. The technology also works against moisture from ethanol fuel and storage, keeping engine parts corrosion and rust free.

XTREME

Precisely crafted full synthetic 2-stroke engine oil using innovative additives. The E-TEC MAX smokeless formula provides the perfect balance between performance, protection and engine cleanliness.

E-TEC MAX Technology significantly reduces smoke, smell and deposits, while maintaining performance and protection.

4 WAIST	Measure around your natural waistline, keeping one finger between the tape and body.
5 HIPS	Across the widest part of the seat.
6 INSEAM	Without shoes, from your crotch to the floor.
